# ESync – the perfect solution for advanced hybrid transmissions

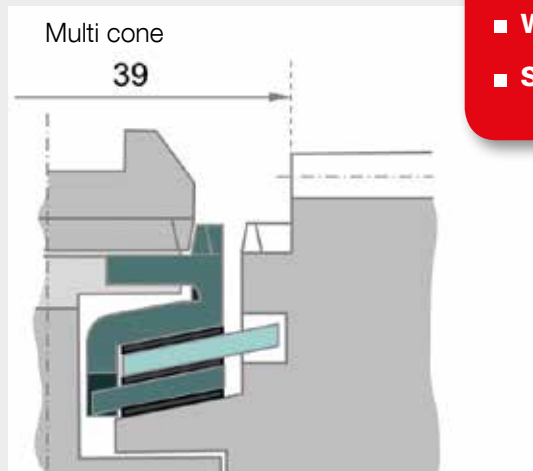

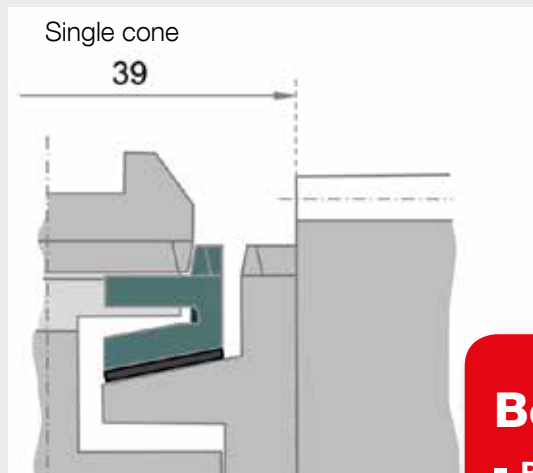

The most important requirement for modern transmissions is the reduction of the package length. Particularly with regard to all type of hybrid transmission, a reduced axial package length is essential.

ESync provides an axial package reduction of up to 11 mm in one synchronizer system. This additional available space might be used for a reduction of transmission or for additional components.

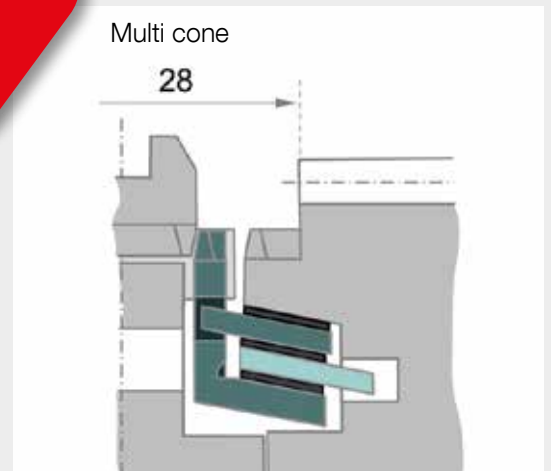

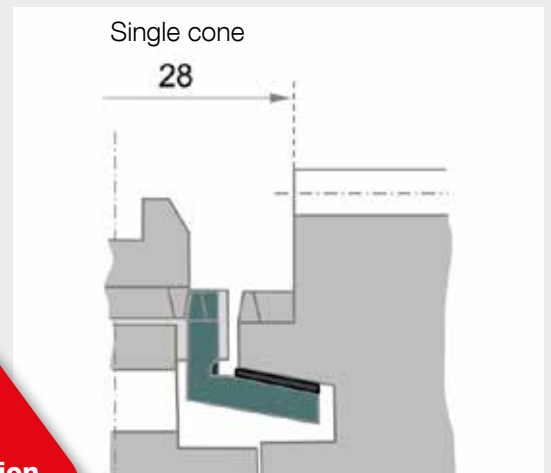

The concept can be applied to single and multiple cone synchronizers as well as to the Segmented Synchronizer System **S<sup>3</sup>** and **S<sup>3</sup>plus**.

## Conventional Synchronizer System

## ESync

### Benefits

- Package Length Reduction
- Weight Reduction
- S<sup>3</sup> compatibility
