

# **Materials Expertise - A Key Enabler for (future) Production**

Univ.-Prof. Dr.-Ing. Dipl.-Wirt. Ing. Johannes Henrich Schleifenbaum RWTH Aachen University Digital Additive Production DAP Fraunhofer-Institute for Laser Technology ILT

## **RWTH Aachen University is one of the best technical universities in Germany**

Statistics				
Annual budget 2015:	€ 869m			
External funding:	€ 337m			
<ul> <li>Affiliated institutes (2013):</li> </ul>	€ 66m			
■ Students:	> 43,000			
Professors:	538			
Institutes	260			
Large-scale institutes	22			
Fraunhofer institutes	4			
Research training programs	27

### "Wirtschaftswoche" 2016

1<sup>st</sup> in Mechanical Engineering
3<sup>rd</sup> in Electrical Engineering
1<sup>st</sup> in Industrial Engineering
3<sup>rd</sup> in Natural Sciences
1<sup>st</sup> in Computer Sciences

Main competitors: Berlin, Darmstadt, Munich

# ... till today! E. g. in the automotive sector or ...

## High performance steels in the automotive sector

#### Today's automotive alloys

- IF-Steels (e.g. HX180YD)
- DP-Steels (e.g. HDT580X)
- BH-Steels (e.g. HC300B)
- AHSS

## High performance coatings e.g. in the tooling sector

- Challenges
  - Improving tool life
  - Improving maximum amount of strokes
     per minute
- Material Solutions
  - HSS, PM-Steel,
  - Special coatings (TiC, TiN, TiCN, diamond-like carbon, ...)

Maximizing process efficiency, minimum cost per part

## **Definition of Material**

"Metal is the term used to describe chemical elements whose atoms combine with each other to form a crystal structure with free electrons. The mechanical properties are first and foremost dependent of its **chemical composition**, **microstructure** and **surface** [...]."

9 © RWTH Aachen University

# The concept of "digital materials" is a key enabler for product design of tomorrow

## **Example: Digital material for vertebral body implant**

- Risk of local overload
- Goal: homogeneous implant loading by local adjustment of stiffness
- Extraction of bone stiffness using CT scan
- Determination of strut diameters from lattice
   material laws
- Mapping strut diameters to implant lattice structure

(Semi) automated adaptation to local bone stiffness

## ... and the fascinating example of high entropy alloys

# Where's the way out?

## **Collaboration is the key to leverage development in the future!**

## Development in the past

- Long development time
- Narrow solution space

#### **Development today**

- Long development time
- Wider solution space

#### Development in the future

- Short development time
- Wide solution space
