

Spin pack components

Your best source for selecting the right spin pack components

Spin pack components selected according to individual process requirements

Spin pack components

- Mesh screens
- Seals
- Gaskets

Spin pack components are consumable parts that require frequent replacement. They are low cost, and easily available from a variety of suppliers. There are seemingly countless options for the selection of spin packs components. With multiple choices such as metal media porosities and mesh screen micron ratings, how do you choose the right supplier and the right components for your spin pack?

Oerlikon Barmag has extensive process knowhow to select the right components for your process. We keep these available for delivery at short notice with an extensive stock range. This helps minimize your on-site inventory, while maintaining high parts availability.

Your advantages

- Filtration setup according to your process (dpf)
- Proven components
- Process support
- Optimized rheology
- Lifetime according to process requirements
- Available from stock

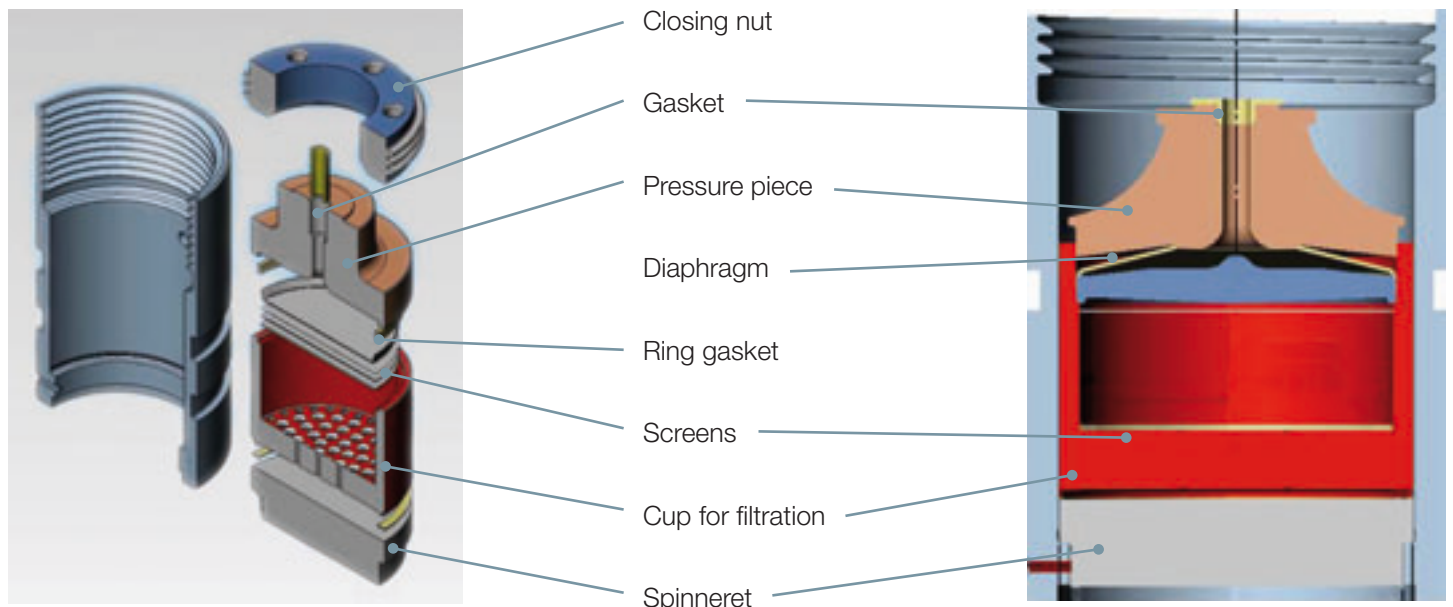

A spin pack assembled using lower quality components can result in leakages, downtimes and process variations.

Smart bundles

A smart bundle is a package of spin pack components, such as diaphragms, sealings, seal bushings, screens and filters, combined with technical support.

Oerlikon Barmag spin packs

Oerlikon Barmag spin packs are available as fully-sealed or self-sealing in single yarn-end or double yarn-end (DIO, 3LA or 6LA) configurations.
