For our brand new **Digital Hub in Munich** (Feldkirchen) we are looking for you: an **experienced, enthusiastic Senior Data Scientist**.

Senior CI/CD Engineer

Oerlikon **innovations** are the foundation of **industrial** solutions to some of the **21st century's** greatest challenges: from **saving lives** to **saving the planet**. Yes, we're that ambitious.

Now imagine the caliber of performance we're pursuing with our digital transformation roadmap.

To achieve **maximum impact**, we're establishing a **Digital Hub in Munich**. And we're recruiting exceptional people to join the founding team.

Top talents who can flex their **entrepreneurial muscles** and conquer complex **mathematical and analytical challenges**.

Professionals who thrive in a **start-up** environment but appreciate **access to decision makers** in an established organization. **Supercharged** performers with original ideas and a clear vision of the **future**.

As a member of our team, you'll make your mark on rapidly evolving technologies such as **materials science** and **additive manufacturing**. On sectors as diverse as aviation, automotive, medicine, energy, and manufacturing. And on a visionary company that wants to integrate **your vision** into its future.

What projects will you be working on?

- **Key role in the processes of strategic project planning for all digital projects with solutions to be integrated into the overall operation architecture**
- **Providing guidance and expertise on system options, risk, impact and costs vs. benefits; create and share operational requirements and development forecasts**
- **Bridging gaps and eliminating barriers between solution design, software development and testing environments**
- **Aligning and enabling interfaces and functions across digital ecosystems**
- **Infrastructure management and working on automation backlog**

oerlikon

Senior CI/CD Engineer

Which skills does this position require?

- Bachelor's degree in computer science or equivalent, master's degree preferred
- Experience in a role with responsibility for the development and administration of the build services, as an in-house service for developer teams
- Several years of experience in DevOps, e.g. automation of tests that were previously done manually
- Very good knowledge of DevOps automation and CI/CD
- Familiar with standard tools in the areas of source control, continuous integration, Agile Manager or Agile Bench
- Experience in common network environments, and good knowledge of Linux Ubuntu, Gitlab CI/CD, Jenkins, Ansible, Docker, etc.

What would be some key daily tasks and routines?

- Prioritizing requests from the operations, development and product teams fairly while demonstrating a sense of empathy
- Highly energetic and comfortable in cross-team collaboration and cooperation
- Acquiring and implementing the excellence of new technologies and related tools to introduce them to the company and to grow the agile development environment
- Automating the deployment of applications, system configurations and security settings
- Designing, implementing and testing of CI/CD Pipelines (making sure that they are running smoothly)
- Collaborating with developers to make sure new environments meet requirements and conform to best practices, and can be smoothly transitioned into operation

We offer a highly collaborative, global environment as a technology leader in several key industries. The combination of a startup dynamic in an established, stock market listed corporation ensures exciting personal development programs and long term perspectives for our employees.

English language is the standard language here and German a strong plus.
We also support and expect a high degree of self education and exploration.
