# œrlikon

# Advancing Sustainable Aerospace

With high-end surface solutions, advanced materials, additive manufacturing and turbine components

# **Oerlikon – a global, high-tech engineering group** with unique competencies

We are a market leader in advanced materials, surface engineering and polymer processing. Our solutions encompass materials, coating equipment, coating services, and the engineering of entire plants. We build our business on unique technology competencies, the widest global reach and trusted customer relations in highly demanding industries such as aerospace, automotive, energy, tooling and textiles. Every day, we develop novel materials, new surface technologies, new applications, components and textile manufacturing solutions to empower our customers to create and innovate better products.

Every major aero engine manufacturer trusts our technologies to boost performance, improve safety and fuel efficiency and reduce emissions.

# Capability ready for ramp up of production

Oerlikon is your optimal choice with resources and capacity in place to meet the supply demands of the Aerospace industry today and tomorrow. As one-stop-shop and dedicated program manager to simplify the supply chain for Aerospace applications with the most comprehensive offering of:

# **Our solutions for enhanced aircraft components**

- **1** Actuation systems
- **2** Cockpit instrumentation
- **3** Tools for structural development

- **5** Interior decor
- **6** Landing gears and airframe components
- 7 Tools for chassis processing

8 Fan blades, LPC and HPC blades, vanes, shrouds and rotor seals

9 Turbine hot section components such as combustors, bearings and bushings, HPT blades and vanes

**4** Air conditioning systems

- Advanced materials for surface engineering, additive manufacturing and other processes
- Surface engineering technologies and services including thin film, thermal spray and other solutions
- Heat treatment solutions such as hardening, vacuum and HIP furnace
- Conventional and non-conventional machining and manufacturing of turbine components
- Additive manufacturing solutions from application engineering, manufacturing to post processing

- **10** Engine pylons, fuel pumps
- **11** Machining of lightweight materials

## Making aerospace more sustainable, powerful and efficient

#### **Industry challenges**

#### **Solutions**

#### **Enhance Engine Performance and Efficiency**

- Lower fuel consumption
- Meet CO, and NO, emission standards

#### **Optimize Hot Engine Components**

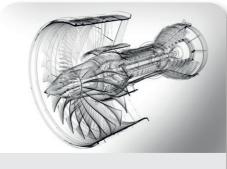

- Operate at higher temperatures
- Increase efficiency and lifespan

#### **Next-Generation Aircraft Needs**

- Satisfy strict standards for landing gears and airframe parts
- Replace harmful hard chromium processes

#### **Reduce Weight and Costs**

- Lighter, cost-effective engine and structural components
- Streamline production of complex and replacement parts

Improve gas path efficiency Engines sealed with abradable coatings achieve improved performance, increased safety, decreased fuel consumption and reduced CO2 and NOX emissions.

**Faster instrument recognition** Attractive coloured coatings with longer wear life and performance for interior appliances.

**Resist high temperatures** Thermal barrier coatings used in combustor and turbine sections of engines protect underlying materials from temperatures that these substrates could otherwise not tolerate.

Ensure safe landings Landing gears coated with our highvelocity oxygen fuel thermal spray technology achieve superior performance and safety. These coatings replace the noxious hard chromium process.

**Break performance barriers** The design freedom of additive manufacturing technology enables optimized performance of aerospace parts with reduced weight and part consolidation.

**Top-notch manufacturing** 

we produce sheet metal and machined components such as inserts and compressor vane assemblies.

Lower costs with increased lifetime Functional PVD coatings significantly improve the performance and durability of precision components and tools. Component service life is increased by using our coatings that reduce friction and protect against wear.

To improve aircraft engine efficiency,

Lower costs with increased lifetime Functional wear coatings significantly improve the performance and durability of bearings and bushings within the engine offering longer on-wing performance via reduced friction and protecting against wear

#### Thin film solutions for aerospace components and cutting tools

Protect valuable components and cutting tools from all types of wear

We are one of the world's leading suppliers of thin-film technologies that significantly improve the performance and durability of precision components and tools. Protected with our BALINIT<sup>®</sup> coatings, the lightweight components used in the aerospace industry permit greater loads, meet closer tolerances, and lower the cost of maintenance.

BALINIT<sup>®</sup>, BALIQ<sup>®</sup> and BALDIA<sup>®</sup> coated cutting tools meet the highest expectations in machining high-end aerospace materials like titanium and nickel alloys as well as CFRP (carbon fiber reinforced plastics).

Thanks to our network of Nadcap-certified customer centers in all relevant industry locations around the globe, our aerospace customers benefit from high-end coating services wherever they are.

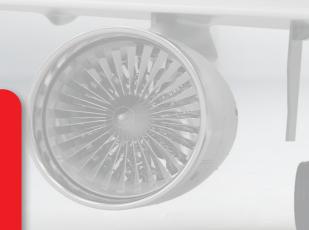

BALINIT<sup>®</sup> TURBINE PRO, the anti-erosion coating for compressor blades, offers outstanding protection from solid particle erosion (SPE) and liquid droplet erosion (LDE) without affecting your component's fatigue life.

BALINIT<sup>®</sup> TURBINE PRO is 40 times more erosion resistant than steel and 5 times more erosion resistant than other PVD coating solutions.

	BALINIT TURBINE PRO	BALORA PVD MCRALY	BALORA TECH PRO
Coating material	TiAIN	NiCrAlY (Ni, Ni/Co, Co)	AlCrO
Coating hardness H <sub>IT</sub>	32 ± 2 GPa / 4641 ± 300 ksi	7 – 11 GPa	11 ± 1.5 GPa
Typical coating thickness (µm)	5 – 25	0.1 to > 100	10 - 17
Friction against steel, dry running	~ 0.5	~ 0.5	
Coating temperature	< 500°C / < 932°F	400 – 500 °C / 752 – 932 °F	600 °C
Max. service temperature	< 750 °C / < 1382 °F	Appr. 1,200 °C / appr. 2,192 °F	1,400°C (*)
Color	Violet-grey	Grey	Dark grey

# Coatings for cutting tools to machine aerospace components

Cutting tools have to resist wear under serious conditions, from high cutting temperatures to heavy loads causing friction and difficulties in removing chips.

We supply state-of-the-art BALINIT<sup>®</sup>, BALIQ<sup>®</sup> and BALDIA<sup>®</sup> coatings that fulfil those requirements and are based on the environmentally friendly and future-oriented PVD and PACVD coating technologies.

#### Advantages of coated tools:

- Longer tool life
- Retention of tolerances and surface quality
- Increase of productivity due to higher cutting speeds and feeds
- Possibility of reduced lubrication and dry machining
- Enable machining within smaller tolerances
- Excellent wear resistance of the tools

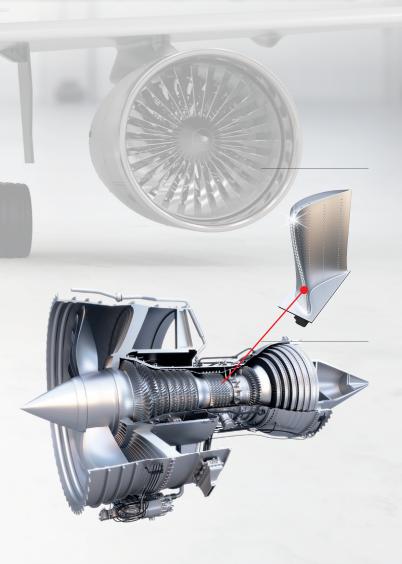

#### **BALORA TECH PRO** environmental barrier coating

This PVD coating significantly extends the service life of aerospace components by providing robust protection against hot corrosion, oxidation, and mechanical wear up to 1400°C. The well-bonded aluminum oxide-based coating adheres effectively to various substrates, enhancing the durability and performance of critical components used in all sections of a turbine engine such as low- and high-pressure turbine blades (LPT/HPT) and low- and high-pressure compressor blades (LPC/HPC).

#### **BALORA PVD MCrAIY –** for high temperature applications

In order to improve the efficiency level of gas turbines, the operating temperatures are often increased to 1.200 °C and beyond. The BALORA® PVD MCrAIY coating meets these extraordinary requirements. It exhibits an excellent substrate adhesion, and can be applied up to a thickness of 100 micrometers without porosity.

Most importantly the MCrAIY composition in combination with the high density can be tailored to provide the optimal barrier against oxidation.

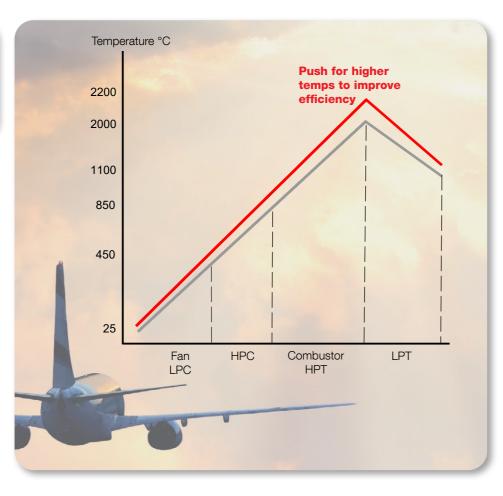

# **Oerlikon Metco surface and material solutions**

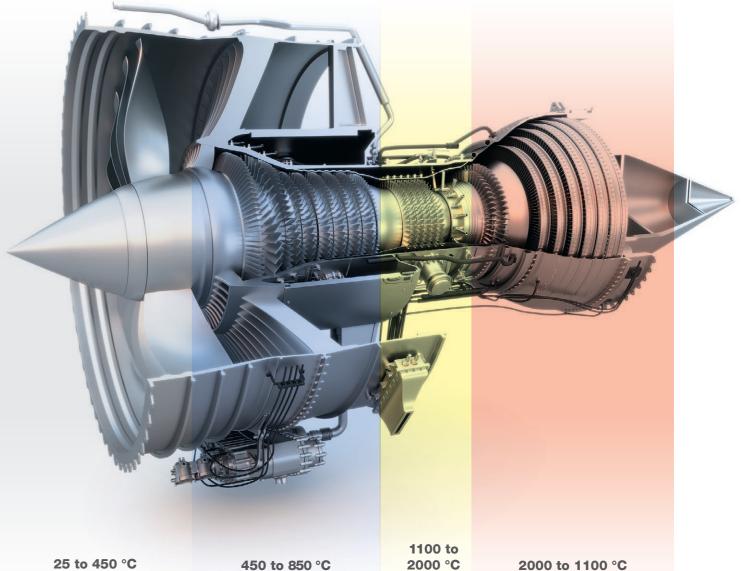

### Maximum protection to optimize performance, reliability and durability

Today, almost all turbine-powered aircrafts have our solutions on board, and we have more OEM approvals than any other coating material supplier. Our next-generation solutions are designed to protect expensive aerospace

components from wear, corrosion, oxidation, thermal attack and more. Even as operating temperatures continue to rise for aircraft engines, our solutions will be there to keep them operating efficiently and safely.

A trusted partner today that's ready to protect and optimize the performance of tomorrow's aircraft.

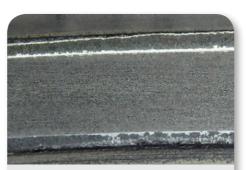

450 to 850 °C

High-tech protection Our advanced EBC coating solutions protect ceramic matrix composite components from the harsh service conditions of tomorrow's advanced engines.

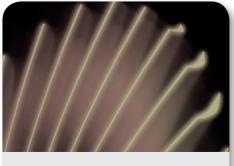

Innovative solutions to resist attack New materials continually being developed to arrest coating degradation caused by CMAS; allowing engines to operate longer in harsh environments.

**Corrosion-Resistant Compressor** Abradable Coatings for gas turbine compressors with improved corrosion resistance that reduces maintenance and operating costs.

**Operate at peak efficiency** As the leader in abradable coatings, we continually evolve our solutions to more effectively improve efficiency in all parts of the engine.

**Quell high-temperature corrosion** Advanced corrosion coatings protect HPC, HPT and LPT blades from oxidation and corrosion.

Novel solutions for hotter engines New compositions for advancedstructured TBCs and efficient, novel approaches to applying them allow engines to operate at higher temperature over long service intervals.

#### Technology and services designed to provide the best performance and efficiency

We ensure our customers get the best solution by using all of our expertise and know-how during every step of the process. Our goal is to provide our customers with a solution that not only meets their exact technical requirements, but is also as efficient and cost-effective as possible.

#### **One-stop solution provider for hot and cold section turbine engine components**

- Production cell concepts servicing high level of delivery performance
- Cross functional work approach with customers for new part introduction
- Supplier to all major aero engine programs
- High-end machining and manufacturing processes with a high level of automation

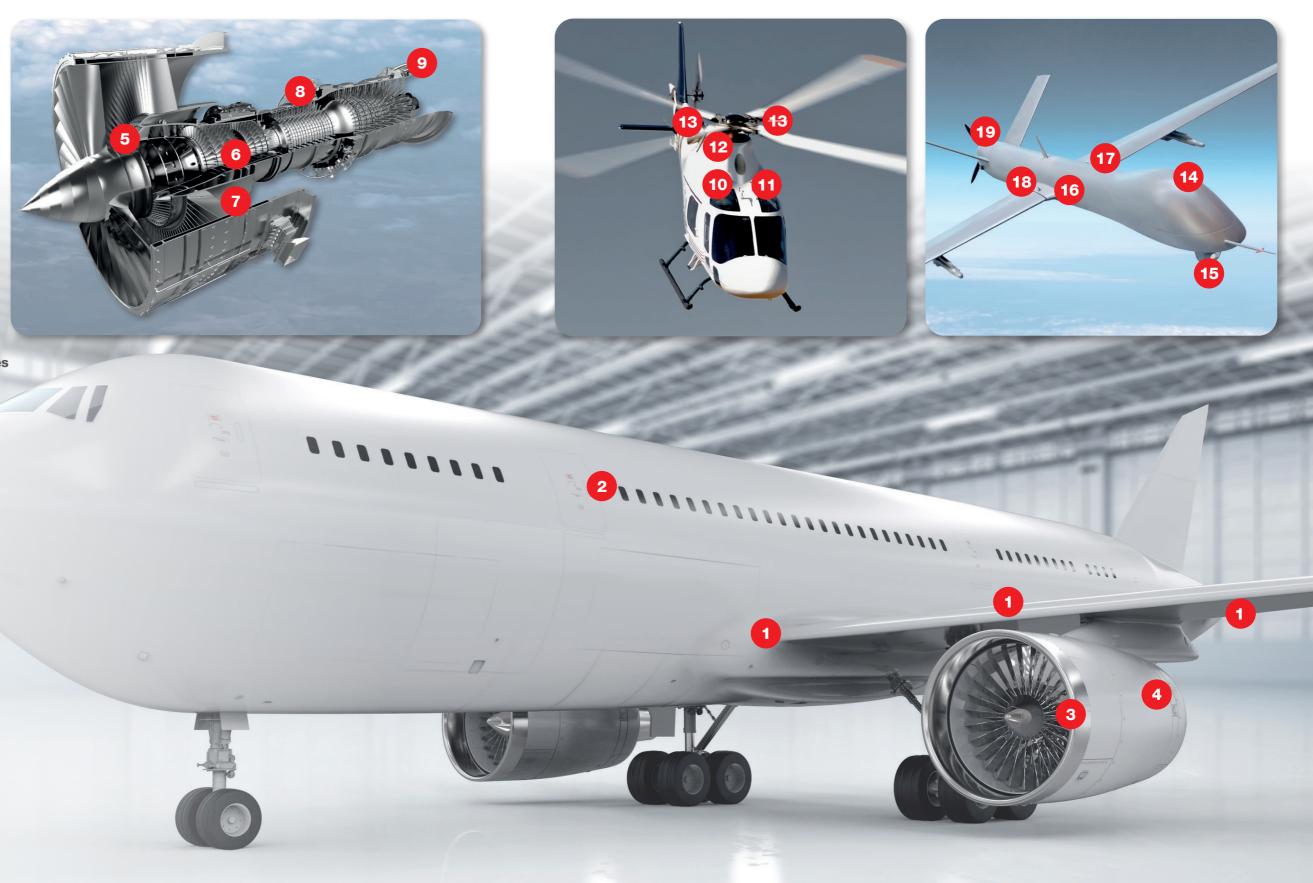

# **Oerlikon AM additive manufacturing solutions**

#### Making aircraft safer, lighter and more efficient

Typical aerospace applications are complex engine parts, structural components and replacement parts. Additive manufacturing enables the production of such parts with lower weight and significantly reduced life-cycle costs. For aircraft applications like brackets, ducting, or seat belt buckles, additive manufacturing can be leveraged for weight and flow optimization, sound reduction, and part count reduction. Additive manufacturing can also have a significant impact on aero engines by integrating components for reduced part counts and mass for compressor vanes, diffusers, acoustic attenuation, heat exchangers, and more.

- **1** Aircraft brackets
- **2** Seat belt buckles
- **3** Ducting
- 4 Impact protection
- **5** Compressor vanes
- 6 Blades
- 7 Heat exchangers
- 8 Ducting
- **9** Diffusers
- **10** Vents
- **11** Windshield defogger duct nozzles
- **12** Housing and enclosures
- **13** Drain fairings
- **14 Payload enclosures**
- **15** Camera mounts and gimbals
- **16** Fuselage structure
- **17** Fuel tanks
- **18** Shrouds and closeouts
- **19** Oil tanks

From brackets to instrument housings in helicopters, and from fuselage structures to battery compartments in UAVs, additive manufacturing makes a difference in a variety of rotorcraft and defense applications.

#### Your global AM product development and manufacturing partner with a strong background in aerospace and defense

#### Why choose us as your partner?

#### **Certified Quality and Affordability**

- AS9100 and ITAR registered
- Full-spectrum capabilities for quality control and traceability
- In-house powder atomization, R&D, and production

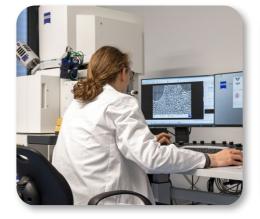

#### **Expert Aerospace Application Engineering**

- Focus on generative design and weight reduction
- Custom parts, weld elimination, reverse engineering, and obsolete part replacement
- Support for material and component qualification

#### **Collaborative Opportunities**

- Material development
- Data set and design generation
- R&D, application engineering, series production, and prototypes

#### Large Scale Additive Manufacturing -**Directed Enrgy Deposition (DED)**

At our Laser Center of Competence in Wohlen, Switzerland, we are revolutionizing aerospace manufacturing with our advanced Directed Energy Deposition (DED) technology. This cutting-edge process allows us to produce large-scale, complex components with exceptional precision and efficiency. We are capable of creating components over one meter in height with wall thicknesses as slim as one millimeter, incorporating intricate structures such as cooling channels. This results in significantly lighter, yet robust parts, perfectly tailored to meet the demanding standards of the aerospace industry.
