OUR DESIGN COLOURS IN POLISHED AND BRUSHED FINISHES

Creating inspiring designs in all different styles and in all colours, with a unique look, is no mere job; it's a craft. Only true innovators can create genuine works of art which successfully unite form and function.

Driven by innovation, our new Design Line gives you a colourful range of surface coatings to give your designs an outstanding look and feel, allowing you to turn your ideas into market-leading products. Whether an attractive polished or brushed finish, our flexible solutions mean your ideas can now be made into reality.

LET YOUR IDEAS FLOW FREELY

Our decorative, colourful PVD coatings are not just ideal for sanitary fittings – for example, they can also protect electronic devices or elegant fixtures from chemical and mechanical considerations.

THE TIME HAS COME FOR GREATER FLEXIBILITY

The Design Line coatings always reflect structures exactly as they are. Matte or gloss effects are achieved prior to coating by blasting, brushing or polishing.

START YOUR CREATIVE PROCESS FROM POLE POSITION

Form follows function: a clear, unique design is what counts, particularly for car interior components – whether metal or plastic. The difference lies in that winning idea, and we have developed our range of coatings to support you as you implement it.

SEE THE WORLD IN A NEW LIGHT

Glasses frames don't just have to come in a polished finish. Ensure all eyes are on you with a brushed finish. Our decorative coatings are increasingly attracting the attention of leading glasses manufacturers.

PERSONALISE YOUR DESIGN

Our coatings give you dozens of colours to choose from, and can be applied either directly to metal or to metallised plastic. This guarantees not only unique lettering, but also resistance to scratches, wear and even sweat – giving you reliability for when it matters most.
