Thermal Spray Wire Products:
Solid Wires (alloyed): Metco™ 8400
Cored Wires (powder-filled): Metco 8405, Metco 405-1, Metco 405NS, Metco 8447

1 Introduction
Oerlikon Metco’s portfolio of nickel aluminum pre-alloyed and powder-filled (cored) wires are products appropriate for general use. During the spray process, these materials exhibit an exothermic reaction, producing coatings with exceptionally high bond strengths that self-bond to most metallic substrates, with the exception of copper and tungsten based materials.

The nickel alloy coatings produced have a high degree of structural integrity, are dense and can tolerate elevated temperatures and oxidizing atmospheres.

In most cases, material selection is dependent on the specific coating environment; however, all of these materials can be use as bond coatings and for machine element restoration.

1.1 Typical Uses and Applications
- Bond Coatings under ceramic top coatings
- Salvage and build-up of machinable carbon steel and corrosion-resistant steels
- Fretting resistance at high and low temperatures
- Particle erosion resistance at high temperatures
- Metco 8443 is appropriate for resistance against oxidation and hot gas corrosion at elevated temperatures

2.2 Key Selection Criteria

- Choose the wire product that meets customer specifications, when necessary.
- Metco 8400 is a good candidate for bond coats and dimensional restoration on nickel and nickel alloy substrates. Coatings are easily machined.
- Metco 405NS should be chosen over Metco 405-1 when tighter controls for customer specifications are required.
- Metco 8405, Metco 405NS and 405-1 produce dense coatings resistant to oxidation and high temperature corrosion.
- Metco 8447 is recommended for salvage and build-up on carbon steel substrates. For a wire coating, it provides good wear and solid particle erosion resistance with high strength and low shrinkage.

2.3 Related Products

- Metco 470 AW is used as a bond coat or dimensional restoration coating on hardened steels, aluminum alloys, cast iron, nickel alloys, titanium alloys and alloys containing columbium or tantalum.
- Metco 8443 provides high temperature oxidation and hot gas corrosion resistance at temperatures up to 980 °C (1800 °F).
- Metco 8448 can be used as a bond coat in alkaline conditions.
- For thermal spray powder processes, Metco 450NS, Metco 480NS and Amdry 956 are chemically similar to Metco 8400.
- Metco 2101 and Metco 404NS are powder products for atmospheric plasma spray or combustion powder spray chemically similar to Metco 8405, Metco 405-1 and Metco 405NS.
- Metco 443NS and Amdry 960 are powder materials for atmospheric plasma spray or combustion powder spray chemically similar to Metco 8443.
- For increased wear resistance, HVOF applied carbide powder materials should be considered. For improved sliding wear resistance at higher temperatures, consider atmospheric plasma sprayed ceramic materials. Oerlikon Metco has a large number of carbide and ceramic materials in our standard materials portfolio.

* Meets the requirements of the specification except chemistry “total all others” = 1.2 %. Not approved for this specification.

3 Coating Information

3.1 Key Thermal Spray Coating Information

- Coating properties can vary significantly as they are dependant on the chosen equipment, gun hardware, coating parameters and coating thickness.
- When properly applied, these coatings are exothermic, producing very good self-bonding properties.
- Maximum coating service temperature to retain oxidation resistance is 650 °C (1200 °F).
- In general, deposit efficiencies of ≥ 65 % can be achieved, when correctly sprayed.
- In general, these coatings are used for bond coats in the as-sprayed condition. Machine and/or grind when control of dimension or surface finish is required.
- See Section 2.2 for additional coating selection criteria.

3.2 Coating Parameters

Please contact your Oerlikon Metco Account Representative for parameter availability. For specific coating application requirements, the services of Oerlikon Metco’s Coating Solution Centers are available.

4.2 Handling Recommendations
Store in the original container in a dry location.

4.3 Safety Recommendations
See the correct SDS (Materials Safety Data Sheet) for the product of interest localized for the country where the material will be used. SDS are available from the Oerlikon web site at www.oerlikon.com/metco (Resources – Safety Data Sheets).
