

## Improved braze syringe system

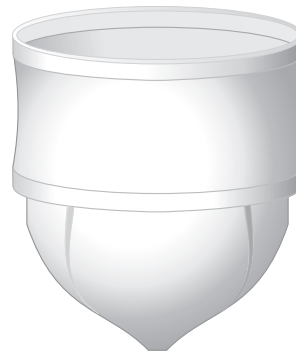

### Dear valued customer,

Oerlikon Metco is pleased to introduce our improved 3.5 oz (100 g) braze syringe system.

The barrels of the new system are clear, so it is easier to see how much braze paste remains in the syringe.

The new plunger system improves flow and ensures complete emptying of the syringe and eliminates any waste.

New tips have a knurled nut that is easier to tighten, ensuring paste does not dry out. Both the tips and end caps provide an air-tight seal.

A newly designed plunger system is more efficient, reducing waste.
